

Nasal-Aire® II

The **Nasal-Aire® II** is a nasal cannula style interface for CPAP therapy. This lightweight interface wears like a familiar oxygen cannula. The **Nasal-Aire® II All Sizes Kit** contains all of the components required to properly size the patient, eliminating the hassle of opening multiple products to get the right fit.

Product Features

- Cannula Style interface with patented sealing **within the nose**
- Virtually eliminates pressure points on the face and bottom of nose
- Features patented L-Flow® technology to deliver flow to patient with less turbulence
- Headgear tensioning not required as cannula creates the seal
- Available in an All Sizes Kit or in individual Size Systems, including a Petite Sized product line

Cannulas available in 6 different sizes. Each size is designed to be 9% larger than the previous size. (Note that the MP size fills an 18% sizing gap between the MD and LG Cannulas.)
