

UTOPIA® AV & NE

UTOPIA® DISPOSABLE FULL FACE MASK –

affordable, comfortable, quality

The Utopia® AV & NE masks are disposable full face masks designed for providing non-invasive ventilation, CPAP or pressure support therapy. The patented adjustable forehead brace promotes patient comfort and compliance. The Utopia disposable full face mask has a built-in chin flap providing an effective solution for mouth breathers.

The Utopia® AV features an anti-asphyxiation valve that allows for access to room air if pressure decreases. The Utopia NE incorporates all of the comfort and features of the Utopia® AV, but eliminates the anti-asphyxiation valve, making it suitable for use with ventilators equipped with an active safety valve. Available in three sizes (small, medium, large).

ORDERING INFORMATION

Ref.	Description	Size	Anti-asphyxiation valve	Qty.
UTO251	Utopia® AV Mask	Small	yes	10/case
UTO253	Utopia® AV Mask	Medium	yes	10/case

AT A GLANCE

FEATURES

- adjustable forehead brace reduces pressure on the bridge of the nose and provides a custom fit for each patient
- soft silicone cushion makes it comfortable for patients even for long-term therapy
- built-in chin flap eliminates need for chin strap
- 360° rotating elbow with swivel allows clinician to select the most appropriate tube position
- anti-asphyxia valve is a safety valve that automatically opens if the flow generator pressure fails, allowing the patient to breathe room air (for ICU ventilators use the NE version)
- easy to use and comfortable headgear
- 100% latex free
- single patient use
